

PRJ - ARC - DWG - 001

Digital Construction Operating System (DCOS) Enterprise Naming Convention Standard

Version: 1.0

Status: Approved

Type: Enterprise Standard

If naming standards are followed from the beginning, DCOS can scale from one project to thousands of projects without losing structure or control.

The Four Universal Laws

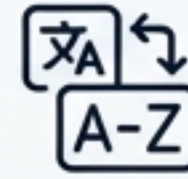

Rule 01: English Only

System standardizes on a single language parser.

Correct: PRJ-ALPHA ✓

Incorrect: PRJ-ألفا ✗

Rule 02: No Special Characters

Allowed: Alphanumeric (A-Z, 0-9) and standard hyphens.

Prohibited: @, #, %, &, *, !

Rule 03: No Spaces in System Codes

Spaces break automated string parsing and URL routing.

Correct: BLD-01 ✓

Incorrect: BLD 01 ✗

Rule 04: Codes are Permanent

Once generated, system codes are immutable.

Status: LOCKED

The Lexicon Matrix: Reserved Prefixes

Core Entity Architecture: Defining Who and Where

Company Structure

[Company Code]

Internal system identifier.

[Company ID]

Unique global identifier.

[Stakeholder Code]

Format for external entities.

Project Identification

[Project Code]

(System ID)

[Project Short Name]

(UI Display)

[Full Project Name]

(Reporting & Contracts)

User Taxonomy

[User ID]

(Database key)

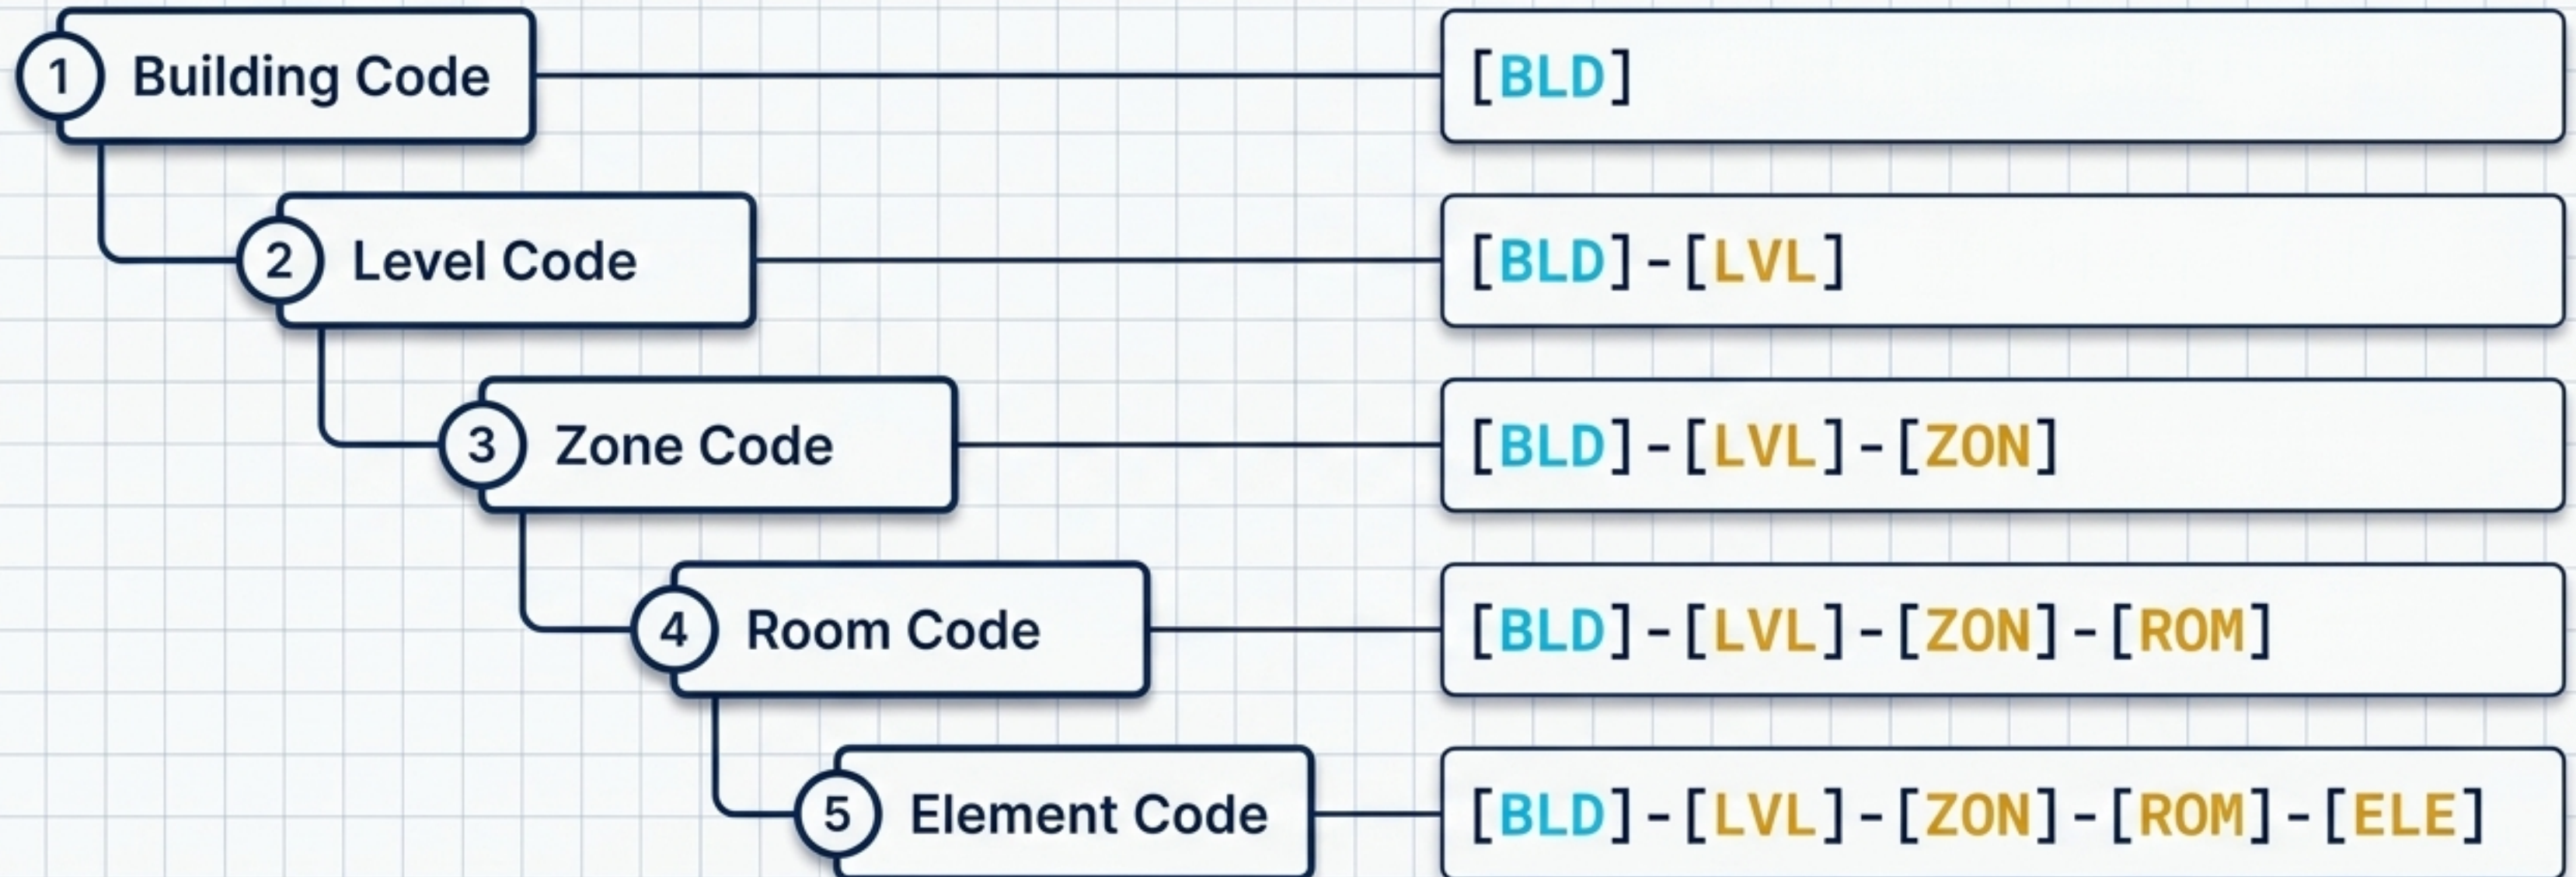

[Username]

(Login credential)

[Email]

(Standard contact format)

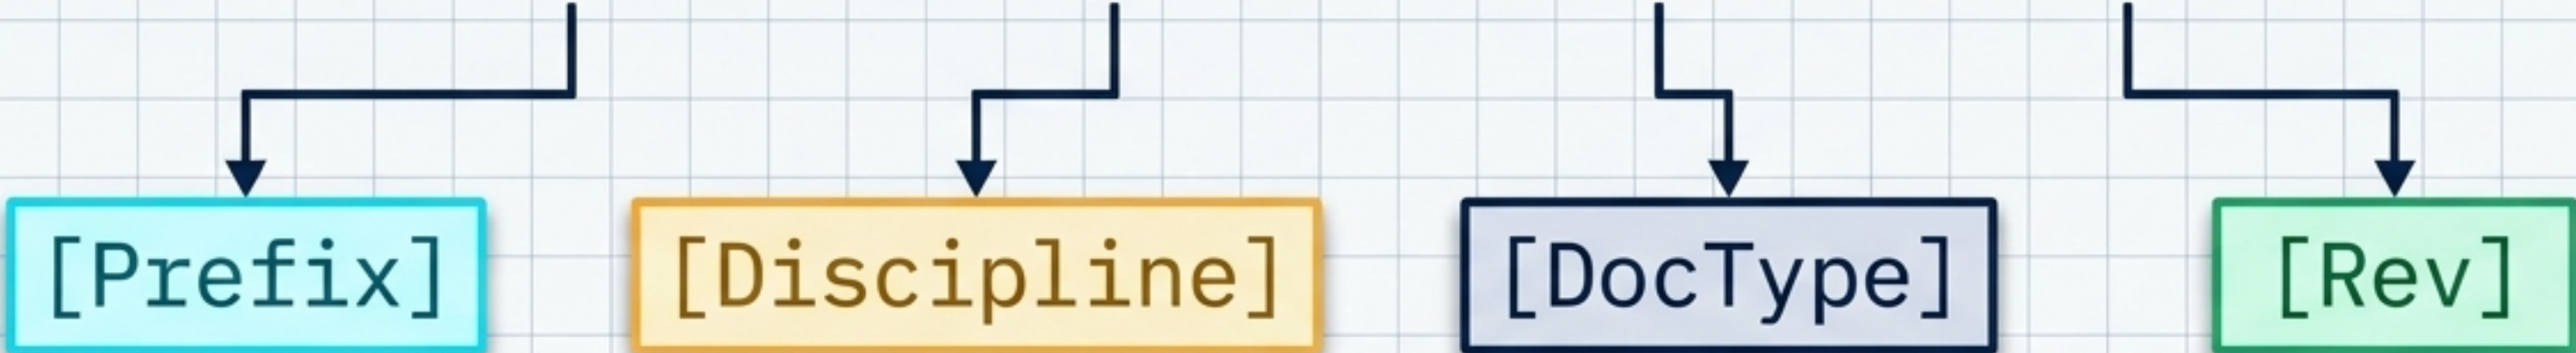

Work Breakdown Structure (WBS): The Spatial Hierarchy

Must exclusively use the
standardized DCOS element library.

Document Naming Anatomy

DOC-ARC-DWG-01

Discipline Codes	
Code	Discipline
ARC	Architecture
STR	Structure
MEP	MEP
BIM	BIM
QS	Quantity Survey
PM	Project Management

Document Type Codes			
Code	Description		
DWG	Drawing	MOS	Method Statement
CAL	Calculation	ITP	Inspection Test Plan
SPC	Specification	MAR	Material Approval
RPT	Report	MIR	Material Inspection
BOQ	Bill of Quantity	RFI	Request For Information
MOS	Method Statement		

Task & Status Standards: The Execution Engine

Task Nomenclature

Task Number Format

[TSK] - [Unique ID]

Task Title Format

[Verb] + [Action] + [Location]

Task Template Code

[TMP] - [Category] - [ID]

[Generic tasks inherit directly from parent templates.]

The Status Mandate

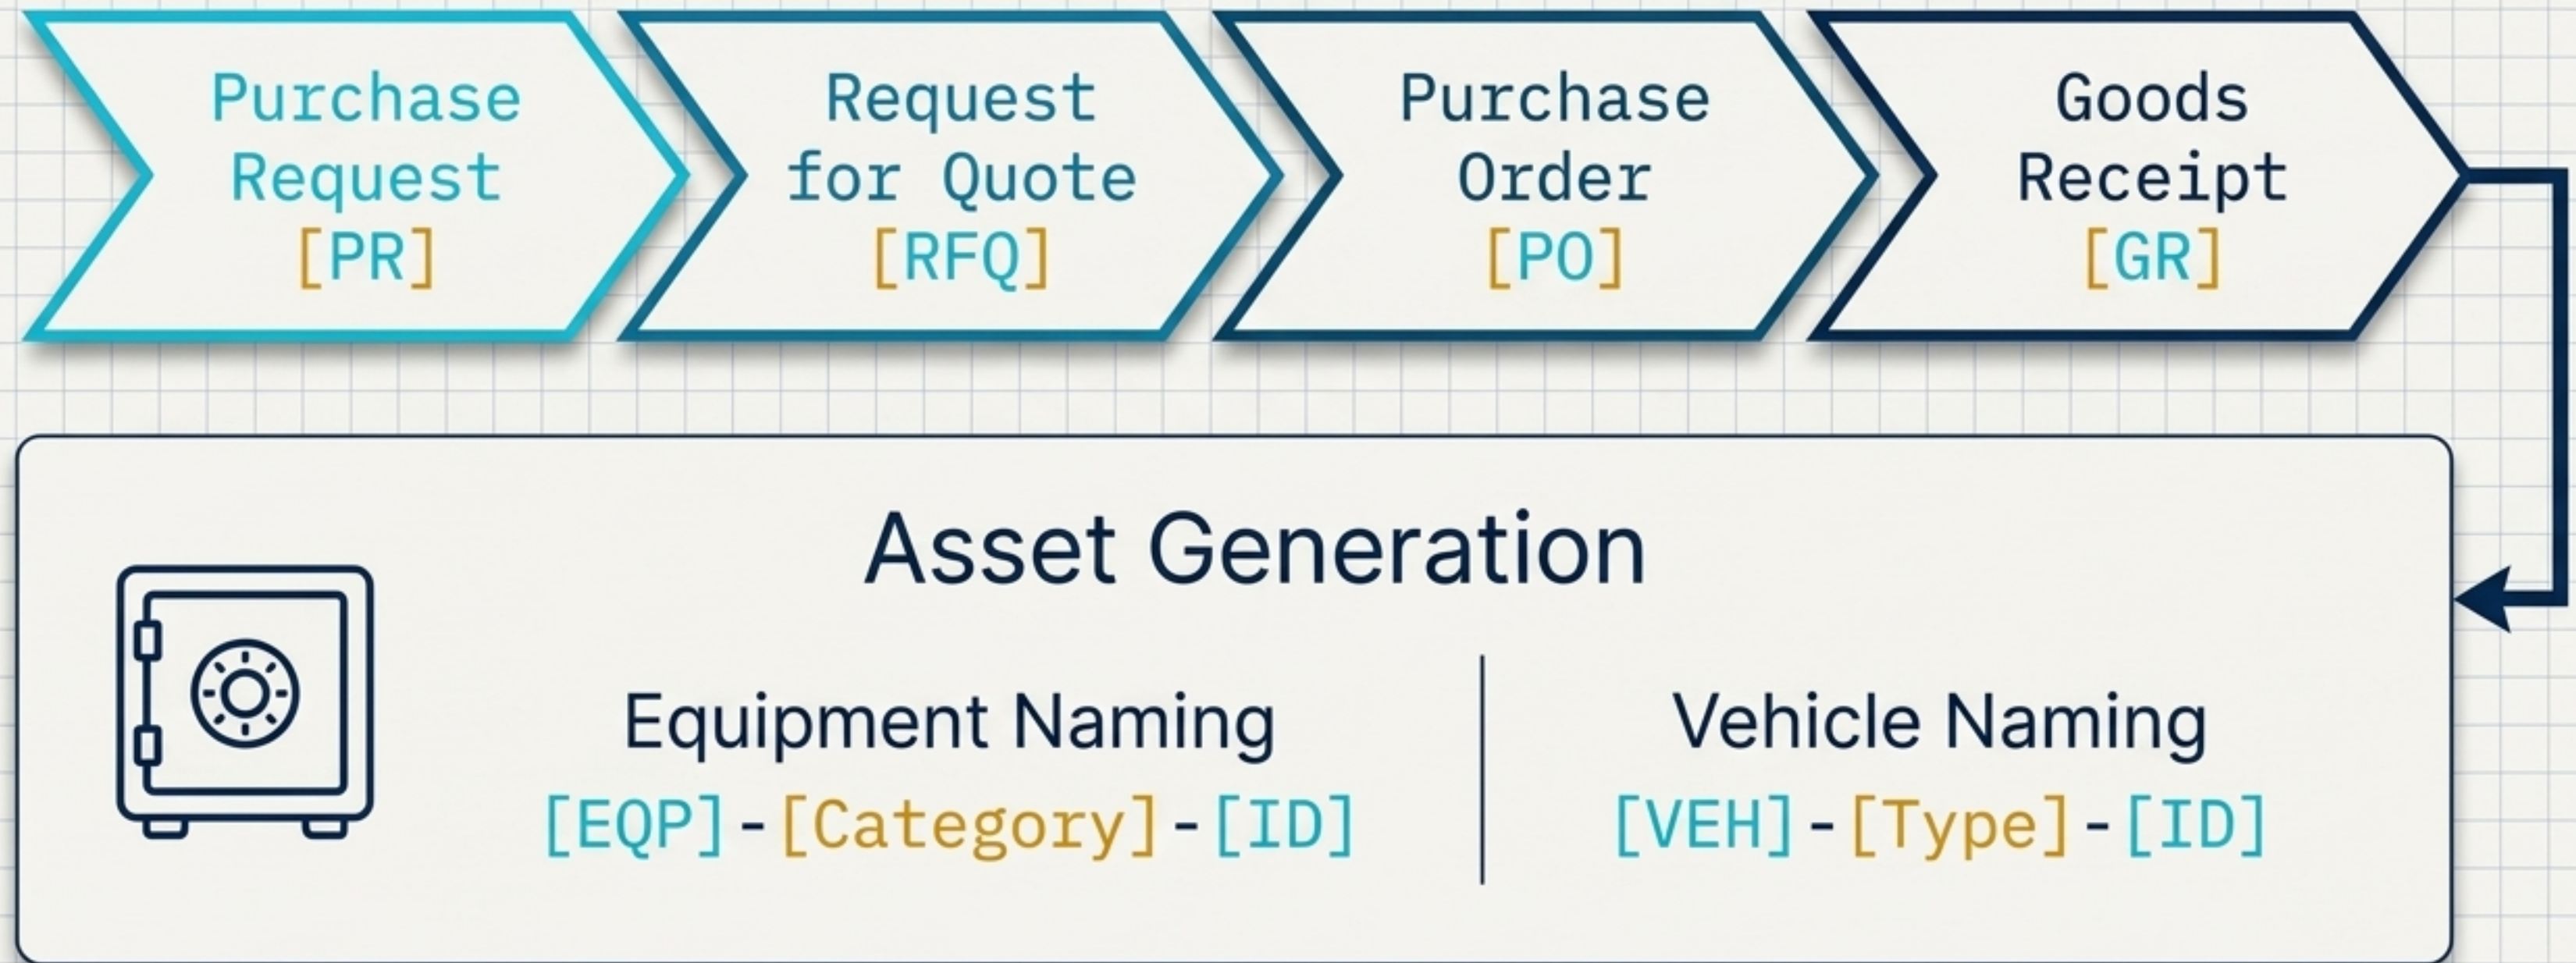

Status Customization is Prohibited.

Task Status, Document Status, and Procurement Status must exclusively use standard DCOS system values.

Custom strings break API integrations and reporting dashboards. Only predefined statuses may be applied.

Procurement & Asset Lifecycle

Physical assets are generated and coded at the conclusion of the procurement cycle.

Commercial & Contract Management: The Ledger

Budgets & Costs

BOQ Item Format

[**BOQ**] - [**Section**] - [Item]

Budget Code Format

[**BUD**] - [**Year**] - [Dept]

Cost Code Format

[**CST**] - [**Category**] - [Phase]

Contracts & Variations

Contract Baseline

[**CNT**] - [**Vendor**] - [ID]

Modifications

A

Variation Order
[**VO**]

B

Interim Payment
Certificate [**IPC**]

Disputes & Extensions

A

Claim Number
[**CLM**]

B

Extension of Time
[**EOT**]

Field Operations: QAQC & HSE Logs

QAQC (Quality Assurance / Quality Control)

Inspection Request

[IR] - [Discipline] - [ID]

Non-Conformance Report

[NCR] - [Severity] - [ID]

Punch List

[PL] - [Zone] - [ID]

HSE (Health, Safety, Environment)

Incident Report

[INC] - [Type] - [Date]

Permit Code

[PRM] - [Activity] - [ID]

Toolbox Talk

[TBT] - [Topic] - [Date]

Storage & Folder Organization

[Project Code]_Master_Files

|

[ARC]_Architecture

[STR]_Structure

[MEP]_Mechanical_Electrical_Plumbing

[BIM]_Building_Information_Modeling

Unstructured files living outside direct database records must still conform to the DCOS spatial and disciplinary taxonomy.

Strict folder naming prevents decentralized document dumps.

System Backend: Database & APIs

Database Objects

1. **Tables**: Enforce `snake_case` naming. Example: `"project_documents"`
2. **Primary Keys**: System constraints. Example: `"id_pk"`
3. **Foreign Keys**: Relational mapping. Example: `"project_id_fk"`

API Architecture

1. **REST Endpoints**: Exact structural pathing. Example: `"/api/v1/projects"`
2. **URL Style**: Enforce hyphenated/kebab-case for web routing consistency.
Example: `"get-document-status"`

Source Code Standards: The Logic Layer

React Components use PascalCase.

```
const DocumentViewer = () => {}
```

Variables use camelCase.

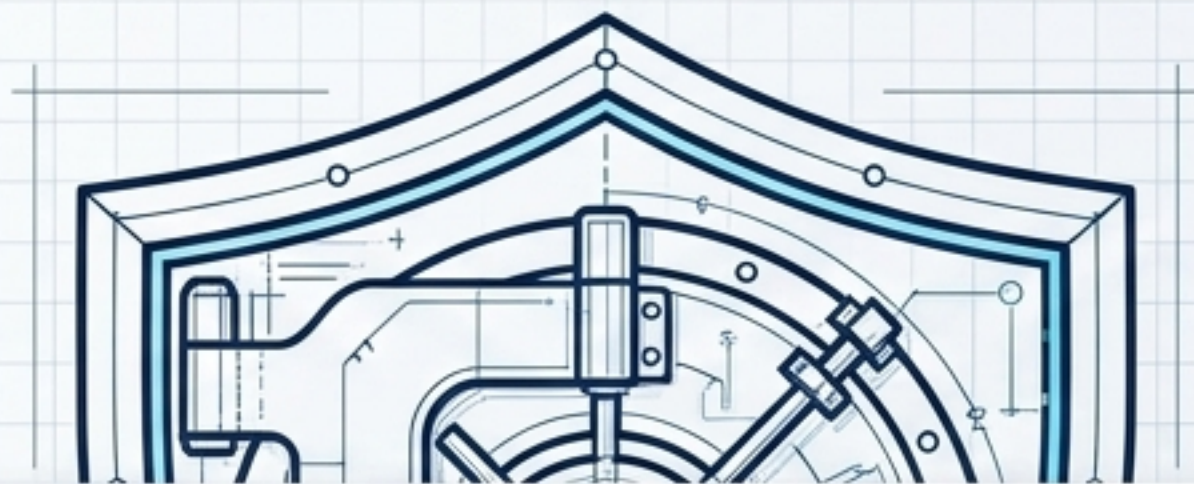

```
let inspectionStatus = 'approved';
```

Constants use UPPER_SNAKE_CASE.

```
const MAX_UPLOAD_SIZE = 500;
```

Enterprise consistency extends down to the individual functions and states driving the DCOS interface.

Governance & The Scalability Mandate

No naming convention can be altered without explicit Governance Board approval.

Searchability | Traceability | Automation | Scalability

Naming conventions are the language of DCOS. Following these standards today builds the operational architecture necessary to manage thousands of concurrent projects tomorrow.
